Work/Organization Experience

TimeFree Innovations, Inc.

June 2024 - July 2024

Web Developer Intern

- Contributed to the development of RESTful web service endpoints using C# and .NET Framework. Converted project specifications to working entities and implemented from repository to controller layers
- Created 4 pages using Figma for two mockup designs for assigned projects. Collaborated closely with designers to implement layouts
- Utilized version control systems (Git) for code management and collaboration with a team of 7 developers

Razza Consulting Group, Inc.

Aug 2021 - Mar 2023

Technology Consultant

- Developed three websites in WordPress from the ground up and assisted in development of over eight other websites
- Handled Site Migration to other web hosting services and post deployment support for over 10 websites, which resulted in a 99.9% site reliability and performance.
- Performed Search Engine Optimization and configured Site Analytics to increase search traffic in seven websites. Raised the Google Lighthouse SEO score by over 10 points through site optimizations and utilizing keywords and focus key phrases
- Administered and configured a Learning Management System (LMS), managed over 50 user accounts and conducted regular maintenance

Springboardbiz Solutions

June 2020 - June 2021

Freelance Java Developer

- Contributed in the development and maintenance of a Human Capital Information System for a local manufacturing firm
- Developed over 10 RESTful web service endpoints essential for building core features in the HCIS.
- Created dynamic reports integrated in the HCIS using JasperReports. Enabled on-demand generation of 8 types of reports, removing the need for manual report preparation.

UPLB Computer Science Society

Development Team Head

Jan 2024 - Mar 2024

- Managed a team of 4 people in developing a Web Application used for the organization's major competitive programming event with 50+ participants
- Developed and deployed 3 major backend features and assisted with the deployment of the application using AWS EC2
- Proactively gathered project specifications, fostering clear communication and collaboration with the event organizer, ensuring precise alignment with product requirements
